The Singapore Immunology Network (SIgN) was launched by the Agency for Science, Technology and Research (A*STAR) with the aim of expanding and strengthening immunology research in Singapore. In January 2008, 6000m² of new laboratory and office space was inaugurated as the home of SIgN, in the Immunos building at Biopolis.

The mandate of SIgN is to expand the knowledge base in human immunology research, ensuring the translation of research discoveries towards clinical and medical applications. Researchers at SIgN investigate immunity during infections and inflammatory conditions, including cancer, using both human tissues and relevant mouse models. Learn more about SIgN at http://www.sign.a-star.edu.sg/.

Research Officer
Principal Investigator: Prof Ren Ee Chee
