

FUJIKURA RELEASES EVALUATION MODULE OF 10 Gbps SILICON OPTICAL MODULATOR ARISING FROM COLLABORATION WITH A*STAR INSTITUTE OF MICROELECTRONICS

Singapore, 13 March 2013 – Fujikura has started to provide an evaluation module of 10 Gbps silicon optical modulator that features excellent potential for mass production. This effort is a culmination of the R&D partnership between Fujikura and the Institute of Microelectronics on optical telecommunications technologies in the recent 2 years.

Commercial availability of silicon modulators will allow small-footprint high speed optical equipment to be deployed in optical-fiber networks.

For more information on the 10 Gbps silicon optical modulator, please refer to [Fujikura's press release](#) .
