

eDataLogger+

for Electronic Form Creation, Tracking and Report Generation

BACKGROUND

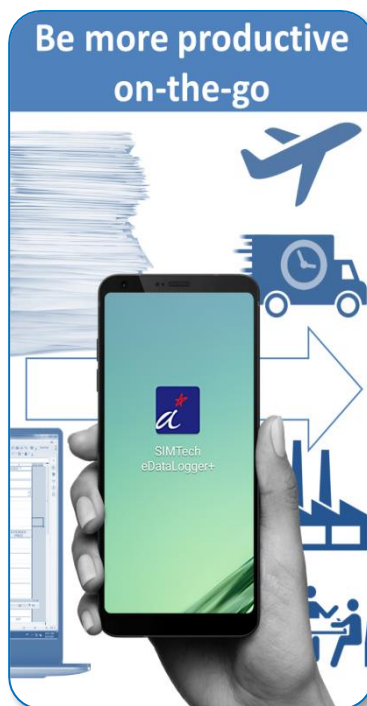

With eDataLogger+, companies can create high-quality reports on their mobile devices. Companies can use the smart in-built functions such as inserting photos, signature, auto-complete with database, barcode, QR code and Optical Character Recognition (OCR) scanner to reduce time and error in generating reports

OBJECTIVES

To equip companies with electronic data logging and reporting capability through the use of eDataLogger+ Android APP and Windows-based Data Analysis Software.

DELIVERABLES

Type	Description
Consultancy	Set-up, configuration, training and on-site implementation
Hardware	S\$8000 worth of Android devices and laptop/desktop computers
Software	eDataLogger+ Android APP and Windows-based Data Analysis Software license

BENEFITS

- Eliminate manual effort to enter and edit collected data
- Eliminate unnecessary travel for document transfer
- Improve productivity and customer service.

Productivity Indicator	Expected Improvement
Reduce time for data capture	50 - 70%
Reduce manpower efforts for report generation	30 - 50%
