

Real Time Dashboard

BACKGROUND

In today's complex and globalised business environment, large amounts of data are being generated. Managing and extracting real value from these data remains a key challenge. Companies often spend a lot of time and effort to perform manual data organisation, analysis and presentation, which are often static and does not reflect very well on the dynamic nature of their business.

OBJECTIVE

To help companies implement a real time dashboard that is customised to suit the company needs and to connect to multiple sources for congregation and analysis of real-time data.

DELIVERABLES
