

21st – 22nd November 2022, 9am – 5:30pm

Multi-purpose Halls 1&2, Innovis, 2 Fusionopolis Way, Singapore 138634

The Institute of Molecular and Cell Biology (IMCB) under the Agency for Science, Technology and Research (A*STAR) and Duke-NUS Medical School invite you to the **2022 Singapore Symposium on Metabolic Diseases/Asia-Pacific Diabetes and Obesity Study Group Annual Conference**.

Inaugurated in 2007 and held annually, the symposium has been a forum to bring together world experts in the broad areas of diabetes, obesity and metabolic diseases to share their latest research findings and insights. The event also serves as a platform for the invited speakers and participants to meet and forge collaborations with local scientists.

This year, it is a joint symposium with the Asia-Pacific Diabetes and Obesity Study Group (APDO) Annual Conference. APDO is an international forum organized by leading scientists in the research areas of metabolic diseases and associated complications from the Asia-Pacific region.

We have 25 speakers from overseas and 10 speakers from local research organizations for this year's event. The topics to be discussed at the symposium will span from basic science to clinical research and cover research topics in neurometabolism, lipid and adipose tissue biology and metabolic diseases.

The symposium is co-organized by the Brain-Body Initiative (BBI), A*STAR.
