

# Services

We provide sorting and analysis services across a wide range of applications and research areas.

Please find on our main page our equipment configuration along with the list of possible fluorochromes that you can use. To facilitate planning of your experiment you can consult the [BD Spectral Viewer Tool](#) or other panel design tools online.

You may also use the [FluoroFinder Tool](#) to design a panel compatible with flow instruments in the core.

If you wish to plan a cell sort, kindly adhere to IMCB safety regulations. To book for a sort, please download and fill up the facility booking form and send your request to [IMCB Flow Cytometry](#), or call 6586 9908.

If you are a first time user, please contact our staff at [IMCB Flow Cytometry](#) to arrange for an initial training session if necessary. Once you have completed the training, you may operate the instrument independently.
