

Histopathology Facility/AMPL

Institute of Molecular and Cell Biology - Core Histopathology Laboratory

Click [here](#) for more information

The Advanced Molecular Pathology Laboratory (AMPL) is situated in IMCB at the heart of Biopolis. This world class facility provides a wide range of pathology related resources to the biomedical research community throughout Singapore and the region. AMPL is built upon a well established histopathology laboratory with a reputation for outstanding expertise and knowhow. The platform provides capabilities to support basic research, therapeutic target validation and drug safety evaluation.

We offer:

- Translational research capabilities:
 - Highly Advanced Histopathology Laboratory
 - GLP certified facility
 - 100% Quality control
 - Collaboration with clinical researchers
 - Platform leadership combines industrial and research pathology experience

- Multi-centered with strong clinical element
 - Conduit to knowledge, experience and clinical resources from around Singapore
 - Close ties to RI researchers to access cutting edge translational research capabilities
- Project management to ensure goals and timelines are met
- Close links to non-human primate research, increasingly important in validating human therapeutics.

We are available to discuss your project plan and to advise on study design and implementation
