

# Smart Waste Manager

## BACKGROUND

Waste streams in manufacturing operations are rarely tracked in real-time, resulting in low productivity. The Smart Waste Manager resolves this issue by monitoring waste generation and reduces costs by minimising material wastes.

## DELIVERABLES

- Training and onsite mentoring sessions
- Licensing and implementation of Smart Waste Manager for real-time monitoring

## OBJECTIVES

- Real-time monitoring for better visibility of physical waste streams
- Identify hotspots of excessive material waste and best practices for waste reduction
- Set reduction targets for cost savings
- Set alerts for abnormal waste generation patterns
- Automate disposal notification to waste collectors

## BENEFITS

- Increase material efficiency
- Save cost from reduced waste
- Reduce environmental impact
- Generate report instantaneously
