Opportunities arise from challenges. Upgrade yourself as Medtech Innovation rises to the forefront of the global health crisis. Join us in our virtual bootcamp today.

Singapore Biodesign enhances health and medical technology innovation capabilities of industry and medical professionals through hands-on learning with real-world case studies. This Biodesign Innovation Process bootcamp will guide participants towards commercialization and healthcare adoption.

The Biodesign Innovation Process provides a systematic approach to the identification of important unmet healthcare needs, the development of novel technologies to address them, and the subsequent development of commercialization plans to bring them into patient care.

At the end of this bootcamp participants should be able to:

1. Define and evaluate an unmet healthcare need with consideration of factors affecting its impact.
2. Invent and assess the viability of potential solutions.
3. Develop and present a credible plan towards technology commercialization.

To apply and for special rates (> 2 pax), email us at SBEnquiry@hq.a-star.edu.sg.
