Meeting ID: 982 3681 3169
Passcode: 138819

Webinar is open to all
No registration required

The immune response to SARS-CoV2 in immunocompromised people.

HIV and Tuberculosis (TB) are amongst the most pressing public health problems in Africa. The epidemiology of HIV associated TB is well researched, but few studies have addressed in detail the mechanisms. Our program aims to answer questions arising from the clinical care of patients with these infections. Over time the emphasis has increasingly encompassed the need for novel interventions.

In this talk I will deal with clinical overlap between, and the immune response to, HIV, tuberculosis and SARS-CoV2 in Africa.

***Robert J Wilkinson** is Professor in Infectious Diseases at Imperial College London and a Group leader at the Francis Crick Institute London. He also directs the Wellcome Centre for Infectious Diseases Research in Africa located in Cape Town, South Africa. His long-term research interest is in understanding and intervening in tuberculosis and HIV-tuberculosis.*
